## How to Sanitize Your Water Filter System Using HOCL Tablets

### Materials Needed:

- HOCL sanitizing tablets (8 tablets)
- Bucket
- Clean cloth or sponge

### 1. **Turn Off the Water Supply:**

- Locate the main water supply valve to your filter system and turn it off.

### 2. **Prepare for Sump Removal:**

- Carefully unscrew the sump holding the 3rd filter in your whole home system. Be cautious as it will be heavy and filled with water.
- Have a bucket nearby to set the sump in and catch any spills.

### 3. **Remove the 3rd Filter:**

- Take out the 3rd filter from the system. Leave the first two filters in place.

### 4. **Add Sanitizing Tablets:**

- Drop all 8 sanitizing tablets into the sump where the 3rd filter was located and re-insert sump into place in the system.

### 5. **Run Water through the System:**

- Turn the water supply back on.
- Run water from all the different faucets in your home.
- Flush the toilets a couple of times to ensure the sanitizer is distributed throughout the plumbing system.

### 6. **Flush the System:**

- Keep running water through all faucets for approximately 15-20 minutes. This allows the tablets to dissolve and sanitize the system.

### 7. **Clean the Sump:**

- Turn off the water supply again and remove the sump. Be cautious as it will be heavy and filled with water.
- Wash/wipe out the bottom of the sump to get rid of any granular residue from the dissolved tablets.

### 8. **Reassemble the System:**

- Once the sump is clean, put the 3rd filter back into place and reassemble the system.
- Slowly turn the water supply back on and check for any leaks.
